## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102/103

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4, 6-7, 9-18, 20 and 22-25 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over EP 0 851 714 [reference B1 of the Information Disclosure Statement filed 12/1/0/03] (EP '714). EP '714 discloses a donor film for making an organic electroluminescent (EL) device, and a method of manufacturing an organic EL device comprising laser transfer of material from a transfer layer of the donor film, wherein the transfer layer comprises at least one of a luminous material, a hole transfer low molecular weight compound, a hole transfer high molecular weight compound, an electron transfer low molecular weight compound, and an electron transfer low molecular weight compound. See the abstract and page 2, line 53 to page 3, line 25. In one embodiment, the transfer layer comprises a combination of either an electron transfer material or a hole transfer material with a luminous material to form a electron transfer emission layer or a hole transfer emission

Application/Control Number: 10/732,853

Art Unit: 1756

ophication/oontrol Hamber: 10/102,

layer, respectively (see Figures 1B and 1C; and page 8, lines 31-34). Exemplified hole transfer low molecular weight compounds include compound 11 on page 7, which is an amorphous, non-polymeric, organic dendrimer of the present invention (see compound 10 on page 16 of the present specification). Therefore, this invention is not novel.

Alternatively, while EP '714 discloses a donor film comprising a transfer layer including a combination of a hole transfer material and a luminous material to form a hole transfer emissive layer, EP '714 does not exemplify a transfer layer comprising compound 11 as the hole transfer material combined with the luminous material. It would have been obvious to one skilled in the requisite art to utilize compound 11 as the hole transfer material combined with a luminous material in the transfer layer of EP '714 because it is specifically taught that this compound is useful as a hole transfer material for forming organic EL displays by laser transfer.

## Allowable Subject Matter

- 2. Claims 5, 8, 19 and 21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John A. McPherson whose telephone number is (571) 272-1386. The examiner can normally be reached on Monday through Friday, 8:00 AM to 4:30 PM.

Application/Control Number: 10/732,853

Art Unit: 1756

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on (571) 272-1385. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
